LETTER OF REFERENCE – BIOMEDICAL IMAGING

Hong Xu started a PhD thesis in the “Fuel Cell Systems and Diagnostics” group at PSI in December 2016. In his PhD thesis he is developing sub-second X-ray tomographic microscopy of polymer electrolyte fuel cells. Fast X-ray imaging is used to better understand the water management in the porous structures of the fuel cell.

He will greatly benefit from the Biomedical Imaging Summer School 2017 for his work, therefore I strongly support his participation.
